### Description

The 0717-4323-99 dual-axis, wide-range electrolytic tilt sensor has a robust, all-metal construction providing durability while maintaining superior tolerances and sensor to sensor performance. It is an economical tilt sensor ideal for a versatile range of applications in many markets. Its low profile makes it ideal over the standard 0717 sensors for designs with low clearance component requirements.

This is a passive electrolytic tilt sensor that requires signal conditioning electronics to provide an output. For a list of compatible signal conditioners, see the Compatible With section.

### Operating Range Behavior

### Functional Diagram

**±50° Dual-Axis Wide-Range Electrolytic Tilt Sensor**  
**Part Number: 0717-4323-99**

**Dimensional Drawings**

**Test Circuit**

All data was acquired with a Fredericks Company Dual Axis 6200 Series Signal Conditioner in single axis mode at 20 °C. A general schematic of our signal conditioners is provided below. Further information on sensor excitation and excitation circuitry is provided on [The Fredericks Company website](#) and in the [application note AN1000](#).

**Certifications and Ratings**

- RoHS Compliant

**Notes**

When using an excitation circuit not designed by The Fredericks Company, ensure that no direct current passes through the sensor. Direct current will lead to sensor damage, output drift, and general instability. For a description of hardware and software design for this sensor, see [application note AN1000](#).

The **0717-4323-99** and all Fredericks tilt sensors must be mounted horizontally (parallel to the surface of the earth and perpendicular to the force of gravity). For best performance, isolate the sensor from vibrations when mounting it.
